   SLARAP — SYSTEM PERFORMANCE REPORT
   Generated: 2026-10-18 16:40:26
========================================================================

[ CURRENT SYSTEM STATE ]
  Health Score : 100/100 (EXCELLENT)
  CPU          : 0.8%  (16 cores)
  Memory       : 7.0%  (0.53/7.6 GB)
  Swap         : 0.0%
  Disk (/)    : 0.3%  (952.52 GB free of 1006.85 GB)
  Load Average : (0.20361328125, 0.05859375, 0.01806640625)
  Processes    : 22
  Network      : up 0.0 KB/s / down 0.0 KB/s
  Uptime       : 0d 0h 0m

[ HISTORICAL SUMMARY — last 24h ]
  Samples: 54
  CPU  avg 0.2%  min 0.0%  max 0.8%
  MEM  avg 7.6%  min 7.0%  max 8.7%

[ HOURLY BREAKDOWN ]
  2026-10-18 15  CPU avg  0.27% max   0.8% | MEM avg  7.68% | samples 30
  2026-10-18 16  CPU avg  0.19% max   0.8% | MEM avg  7.46% | samples 24

[ TOP PROCESSES BY CPU ]
      446  python3                 CPU  71.1%  MEM   0.4%
        1  systemd                 CPU   0.0%  MEM   0.2%
        2  init-systemd(Ub         CPU   0.0%  MEM   0.0%
        7  init                    CPU   0.0%  MEM   0.0%
       43  systemd-journald        CPU   0.0%  MEM   0.2%
       92  systemd-udevd           CPU   0.0%  MEM   0.1%
      105  systemd-resolved        CPU   0.0%  MEM   0.2%
      112  systemd-timesyncd       CPU   0.0%  MEM   0.1%
      177  cron                    CPU   0.0%  MEM   0.0%
      178  dbus-daemon             CPU   0.0%  MEM   0.1%

======================================================================
INTELLIGENT RECOMMENDATIONS
======================================================================

1. [HIGH] High CPU process: python3 (PID 446)
   -> Consuming 63.6% CPU. Review or terminate: kill 446

2. [MEDIUM] Log directory is large
   -> /var/log ~812 MB. Archive/rotate: sudo logrotate -f /etc/logrotate.conf

3. [MEDIUM] Automation task failing: fail_test
   -> Failed 3 time(s) in last 24h. Check the command and retry policy.

4. [LOW] Optimal backup window identified
   -> Lowest average CPU at 16:00 (0.2%). Schedule backups then.
